# Firmware Update Process

1) Switch OFF camera
2) Connect USB cable to PC and camera Aux. input.
   Use PC rear USB ports as front ports are often not working.
3) Once Setup_UCXP_Flash_vX.X.XX is installed, reboot your computer.
4) Switch ON camera
5) Launch UCXP_Flash_vX.X.XX.exe
6) Choose the camera type in the list (see below figure 6)

**Figure 1 : Step 6**

And Click Ok

**Figure 2 : Waiting Box**

A waiting box appears, it can take a few seconds to establish the communication between the camera and the computer.
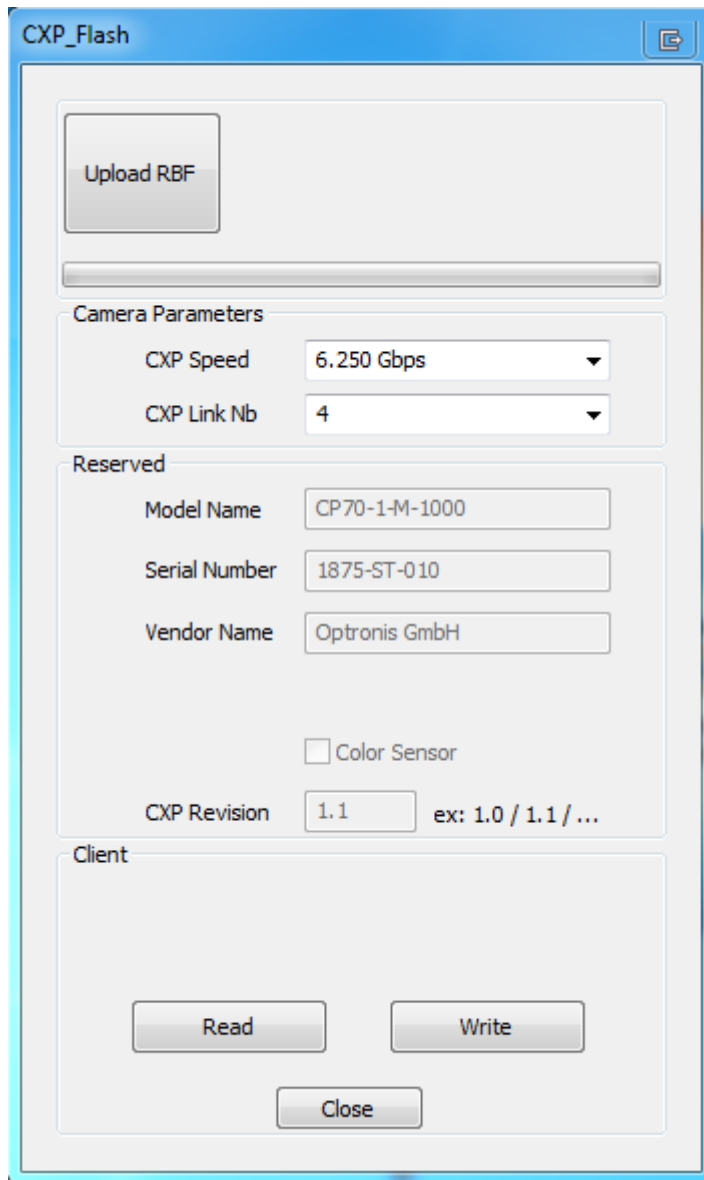

**Figure 3 : Step 7**

7) Click on "Upload RBF" and select the '.rbf' file.
Wait until finished.
Click on Close.
PowerCycle the camera.

## Possible Issues:

If a pop up window shows message "No USB cable detected", please:
- Check that drivers are installed (see Figure 4 below).
- Try another USB port (rear port)
- Open task manager and check that no former process of "UCXP_flash.exe" is running. End any running process before opening it again.
